**Proposed Solution Template:**

| S.No. | Parameter                                   | Description                                                                                                                                                                                                       |
|-------|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.    | Problem Statement<br>(Problem to be solved) | Healthcare administrators and physicians struggle to identify heart disease risk factors from complex data with 18+ variables. Manual reporting takes 40+ hours and lacks interactive visualization capabilities. |
| 2.    | Idea / Solution description                 | Create an interactive Tableau-based analytics platform with 3 dashboards (Demographic, Lifestyle, Overall) featuring 10 visualizations to transform raw healthcare data into actionable insights.                 |
| 3.    | Novelty / Uniqueness                        | First-of-its-kind integrated dashboard combining demographic analysis, lifestyle factors, and comorbidity patterns in a single platform with drill-down and storytelling capabilities.                            |
| 4.    | Social Impact / Customer Satisfaction       | Enables faster healthcare decisions, improves patient counseling, supports evidence-based policy making, and increases customer satisfaction through easy-to-understand visual data.                              |
| 5.    | Business Model (Revenue Model)              | Free for individual use (Tableau Public), organization-wide deployment via Tableau Server/Online with subscription pricing.                                                                                       |
| 6.    | Scalability of the Solution                 | Can be extended to analyze other diseases, integrate additional data sources, add predictive analytics, and deploy across multiple healthcare organizations.                                                      |
